Potential therapeutic approaches against SARS-CoV-2

1. ACE2: Antibodies to spike resulting in vaccination or adoptive transfer block virus binding to ACE2.

2. Protease inhibitor: Protease inhibitor blocks and prevents TMPRSS2 from activating the spike protein through protease cleavage.

3. CD8⁺ T cell: Virus-specific effector CD8⁺ T cells arising from vaccination recognize infected cells, secreting cytotoxic granules to kill infected cells.

4. Mechanical filtration: Pro-inflammatory cytokines can be neutralized through transfer of blocking antibodies, or through mechanical removal from the blood.

Journey from Illness to Wellness
